LC54	54	23 1/2	12

Quality One Woodwork provides you with a full line of unfinished cabinets for a variety of uses. All cabinets are assembled and ready to install allowing you the hardware and finish of your choice. Start your project by planning your cabinet configuration using the grid below.

HOW TO DESIGN YOUR PROJECT

- 1. Measure The Entire Room-** Using the grid below, record the length of each wall in your room. Make sure to include the breaks in the walls such as doors and windows. Also indicate placement of the fixtures, such as air vents and permanent appliances, by measuring from the centerline of the plumbing, ducting and outlets.
- 2. Create The Floor Plan-** Using the measurements on the grid, begin inserting cabinets into the plan with the sizes available on the reverse side of this sheet. If your project has a corner, start in the corner and work in both directions.
- 3. Review Your Layout-** Prior to purchasing, take a few minutes to review your layout ensuring measurements are correct and you have accounted for all items to be placed in your design.
